

DAZER[®] II

The **DAZER** is a hand held ultrasonic dog deterrent useful for anyone who wants to avoid contact with dogs. The **DAZER** is a humane alternative to sprays and other methods to avoid dog bites and aid in training.

The **DAZER** emits a high frequency sound heard by dogs and cats. It is harmless to animals and barely perceptible by humans. The **DAZER**'s output startles the approaching dog causing most to stop, move away or stay in place allowing the user to avoid contact with the animal.

For training dogs

Operation as a deterrent

1. Point the **DAZER** toward the approaching animal
2. Press the button and activate the **DAZER** for 1 to 2 seconds
3. Repeat as necessary to repel or stop the animal

Point the silver disc at the front of the **DAZER** towards the animal for best results. The **DAZER**'s output is directional and therefore the effectiveness is reduced when used at an angle. It is often more effective to use 1 or 2 second repeated bursts rather than a constant activation. Although the animal will hear the high frequency sound at 7 meters (20 feet) or more, it is most effective and discomforting at 2 to 5 meters (5 to 15 feet). Many experts agree that to avoid contact with unwanted dogs, it is best to face the approaching animal, not to turn and run. They also caution not to stare at the animal. The **DAZER** will help the user to maintain a safe zone and avoid the unwanted animal.

Operation as a training device

The **DAZER** can be used in training and conditioning situations such as quieting barking dogs, keeping pets off furniture and to reinforce commands. The **DAZER** should be used from a distance of 2 meters (5 feet) or more for best results. The **DAZER** should be used in conjunction with normal verbal or hand commands as reinforcement or to interrupt bad behavior. As in all training, follow standard repetition cycles and positive reinforcement practices.

Note: Upon the first use your pet may regress from the area entirely. This reaction is not unusual and is a result of animal recognising the sound and its intensity. The sound is not physically harmful to the animal.

Technical specifications

<i>Dimensions:</i>	57.15mm W x 144.4mmL x 33mm D - 2.25" W x 4.5" L x 1.3"D
<i>Allowable Operational Temperature:</i>	18° to 49° C (0° to 120° F)
<i>Weight:</i>	127.5gm / 4.5 ozs. (incl. battery)
<i>Power Requirement:</i>	9 Volt Alkaline Battery (included)
<i>Average Battery Life:</i>	3 to 6 months (approx.)
<i>Optimal distance:</i>	7 meters (20 feet)
<i>Frequency:</i>	24.5 + 2 KHz
<i>Angle of Dispersion:</i>	30 Degrees
<i>Sound Output:</i>	115dBA
